First Stationary Position

Today Jupiter reaches First Stationary Position. Its apparent movement through the heavens has been slowing until today when it will stand still and begin moving backwards. Today is Ahau day, 40 days before the final Total Solar Eclipse of 2012. The Total Solar Eclipse of 2012 is 40 days before the end of the 13th Baktun.

In Volume 13 of this newsletter I spoke of retrograde Jupiter and how the sacred dates of Chan Bahlum were timed to Second Stationary Position. The occurrence of a stationary position of Jupiter on the sacred Ahau day is another strong piece of evidence that the whole cosmic schedule of the heavens for 2012 was known to the Mayan calendar priests. Jupiter will then reach opposition on December 3, also an Ahau day. During this period, Jupiter will shine brightly at its greatest magnitude for the entire year. The Second Stationary Position, when Jupiter goes “direct” and resumes its proper motion through the sky, is on January 29, 2013. Chan Bahlum has beautifully framed the end of the Mayan Great Cycle within the parentheses of retrograde Jupiter.

Jupiter is known as the planet of the Mayan kings, a patron of royalty. The incredible symmetry of the astronomical events of 2012 suggests that we are witness to a preprogrammed revelation, the unwinding of a mystery wrapped in an enigma. When celebrating the Second Stationary Position of Jupiter, Chan Bahlum would often time his rituals for a few days after the event had occurred, perhaps so that direct motion could be observed. February 1 is also an Ahau day. Displaying a like-in-kind structure to ritual dates recorded in the Palenque hieroglyphs, the ending of the 13th Baktun is the ultimate crowning example of cosmic harmony. The overwhelming evidence suggests intentional design. I am calling the transition to the next World Age: “The Dance of the Lords.”

The period between the November 13th Total Solar Eclipse and the end of the Great Cycle is on the final page of the Dresden Codex as the “Time of the Jaguar Sun.” What should we expect from the Jaguar Sun God monument on Robinson Crusoe Island?

Isla Mágica

09 al 13 de Noviembre Isla Robinson Crusoe CHILE

El 13 de Noviembre del 2012 será el último eclipse parcial de sol antes del fin del calendario Maya y podrá ser visto en Chile sólo desde Isla Robinson Crusoe. Si a esto le sumamos el conservar un posible monumento del dios Chan Balum y que el evento astronómico calce con las predicciones realizadas hace más de 5.000 años por esta civilización nos resulta una aventura inolvidable en esta fascinante isla.

*¡Ven a ser parte de éste mágico momento en Juan Fernández
y comienza con nosotros esta nueva Era!*

For those of you who can't make it to the island you can always take a virtual tour through Google Earth. I have been playing "pin the tail on the jaguar" here with the first satellite imagery I have ever seen that shows the island monument with good resolution. The Sun God tower is on the right casting a long shadow as it gazes west to the sunset.

My flights are booked and my mission is clear: bring home the sacred wisdom of the ancient Maya so that we may transition to the next World Age. The sublime genius of these omniscient kings buoys my spirit and I can envision nothing but benevolence. With only a month remaining until I fly to Chile and fulfill my destiny I remain upbeat. My evolving vision for MAYAPOLOOZA has come to include an installation exhibit in the rebuilt shell of Pedro's "Flying Fish" hostel. Here I will tell my truths.
